

DBMS Assignment report

Greetings of the day..!

Databases.py : In this file, I had written a code to establish a connection to mysql and to create database ecommerce_record. And also I had written a login to create tables and to retrieve the data from tables.

Setup.py : In this file, I had written a code to insert data into tables by importing .csv files.

After data available in the tables, I had written a logic to perform at least 5 insert operations in the orders table and also written a code to fetch all the records that are available in the orders table and print on the console.

Main.py: In this file, I had implemented create_server_connection, create_switch_database and create_insert_query methods by using database.py file.

Ecommerce assignment 3 question : In this file, I had written a queries for 3(a), 3(b) and 3(c) problem statements.

Thanking you,

With Regards,

Jaya Chandrika. B
